Project Description :

Now-a-days a CV is a must in any job field. Our app makes this hectic and complicated process easier. We have already tried to make an offline CV generator. We want to develop our idea and turn it into a web based CV generator which will be a useful application for all.

Platform:

Desktop, Mobile.

Target Users:

Our target audience is anyone who is looking for a job or internship.

Functionalities:

This CV generator will collect information from the user on basis of job or internship he wants to apply for. By taking manual inputs and then generate a CV in the user's desired format. There'll be different templates as per user's requirement. This way the user's CV will not miss any important point or skill.
